

SKILLS ACQUISITION

How does it work?

Easy 3 Steps Process

- 1 STEP 1:** Students complete a self-assessment survey BEFORE completing any moozoom activity (most likely in September).
- 2 STEP 2:** Students complete a self-assessment survey AFTER completing all or most of moozoom activities (most likely in April/May).
- 3 STEP 3:** Teachers and school administrators may access the Skills Acquisition Dashboard and find out more about the skills their students have acquired during the year.

About our self-assessment surveys

moozoom is currently engaged with [SRI International](#) in a study that will assess student SEL skill acquisition over time. The study involves the creation of a customized pre/post survey that aligns with moozoom's theory of change and pedagogy, namely that observation of SEL aligned behaviors in live action videos leads to rapid comprehension of SEL concepts and SEL skills acquisition.

The pre/post survey uses an Likert agreement scale for self assessment questions aligned to the five SEL competencies defined by [CASEL](#).

moozoom's pre/post survey will ask students 5-6 questions per SEL competency prior to a student's engagement with moozoom and again after a student completes engagement with the platform.

In addition to analyzing the results of the pre/post survey, [SRI International](#) will also analyze moozoom's other assessment data including student wellness check-ins, utilization reports, and quiz results to produce a comprehensive report of moozoom's effectiveness in supporting SEL skill acquisition over time for all students.
